
Numbers above bars: passes / recorded attempts. Bottom row: execution errors. Hatched bars are incomplete.
* Luna baseline: 38 historical observations + 1 fresh; historical client 0.154.0 versus 0.160.0 for hints.
Local schedule: 3 concurrent trials initially, up to 6 sharing 8 CPUs after the user-requested amendment.
Historical controls differ in client version, concurrency and date. Execution errors are not automatically physics failures.
